PAIRED-STATE ASSAY

MedOFF query → MedON ranking

High accuracy is necessary — but is it sufficient?

Subject identity

QUESTION

state, or the patient?

FINDING

subject fingerprinting
inflates accuracy

Recording geometry

QUESTION

physiology, or contact montage?

FINDING

transfer is
geometry-gated

Baseline severity

QUESTION

treatment response, or
baseline severity?

FINDING

state accuracy does not
predict response

No — high paired-state accuracy is not sufficient: validity has three distinct forms

Audited identifiability

External transfer

Clinical prediction
